Digital Dining Selects Vendor Safe Technologies for PCI Compliance on new DD Guard Product

Vendor Safe chosen to provide a simplified, low-cost PCI DSS compliance solution

LAS VEGAS, NV, July 27, 2010 (from the RSPA RetailNOW Convention and Expo, Booth 911) – Digital Dining, a pioneer in the PC based hospitality market, and Vendor Safe Technologies announce a joint partnership between the two companies that allows Digital Dining to resell the Vendor Safe PCI Managed Security Suite™. This innovative solution, called DD Guard, will enable Digital Dining’s end users to achieve Payment Card Industry (PCI DSS) compliance standards within 30 days. The Payment Card Industry Data Security Standards (PCI DSS) is a set of required security practices designed by major payment brands, including American Express, Discover Financial Services, JCB International, MasterCard Worldwide and Visa Inc. International. These guidelines, commonly referred to as PCI, assist merchants in preventing a data breach.

“We are proud to team up with the PCI experts at Vendor Safe Technologies,” said Andre Nataf, Senior Business Development Manager at Digital Dining. “We are dedicated to providing our clients with innovative Point of Sale (POS) systems. By combining our solution with the DD Guard technology platform powered by Vendor Safe, Menusoft can ensure that we are able to support our clients’ efforts toward obtaining PCI DSS validation and ongoing compliance.”

“Many merchants in the hospitality industry are unaware that there are over 200 requirements for achieving PCI DSS, and maintaining a PA-DSS application is just one aspect of obtaining compliance,” said Chris Melson, CEO at Vendor Safe Technologies. “Our PCI Managed Security Suite™ and Self Configuring Firewall Architecture™ enable merchants to easily achieve and maintain PCI compliance at an affordable price point. We are delighted to be selected by Digital Dining and look forward to the partnership.”

About Digital Dining

As a pioneer in the PC based POS hospitality market, Digital Dining is proud to be approaching its twenty-sixth year in business. Today, it continues to lead the industry with extremely innovative functionality and features, most of which have come from suggestions made by our more than 50,000 customers. From independents to large chains, from quick service to table service, Digital Dining continues to be an innovator in restaurant POS and handheld Point of Sale solutions. About Vendor Safe Technologies

For more than 20 years, Vendor Safe Technologies has developed, deployed, and supported innovative security technologies. The company's Self Configuring Firewall Architecture™ and Global Security Mesh™/VPN enables PCI Level 2, 3 and 4 merchants to become PCI compliant within 30 days at the lowest total cost of deployment, and the lowest total cost of ownership while requiring no IP address changes to the LAN or WAN. Vendor Safe solutions are secured by the superior defenses of firewalls from Juniper Networks. Learn more by visiting the Vendor Safe website at www.vendorsafe.com.
